Allowable Subject Matter

Claims 22 – 32 are allowed. The following is an examiner's statement of reasons for allowance: as stated in the previous office action, prior art fails to teach or suggest, either alone or in combination, a method for flowing liquid on surface, the method comprising supplying the liquid from a first port of an applicator device to one end of a flow path of the device; applying to the liquid a first port pressure via the first port; receiving the liquid from the other end of the flow path in a second port of the device; applying to the liquid via the second port a second port pressure different to the first port pressure; promoting, via the difference between the first and second port pressures, flow of the liquid from the first port to the second port via the flow path in response to the flow path being located proximal to the surface and the liquid therein contacting the surface; and drawing, via the first and second port pressures, the liquid towards at least the second port in response to withdrawal of the flow path from the surface. The closest prior art references of Freudenthal, et al. (U.S. 6,942,836) and Unger, et al. (U.S. 6,951,632) fail to teach the method steps above, such that the liquid is drawn towards the second port *in response to withdrawal of the flow path from the surface*. The flow paths of Freudenthal, et al. and Unger, et al. are determined by a substrate and capillary element, *of which the substrate is not withdrawn or displaced from the surface*.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
